### Summary of Meeting

The prevalence of acute pulmonary injury in the ICU is high, and current treatment is only supportive. As recently stated in the *state-of-the-art* pulmonary research conference (Aspen Lung Conference, 2007), where findings from the NHLBI ARDS Network clinical trials were summarized, clinicians and scientists hoped that new pharmacologic, biologic, and genetic approaches for a better understanding of pathogenesis, pathophysiology and treatment of ARDS would improve outcomes in the near future.

We herein announce the second conference on Translational Research in ARDS, held under the auspices of CIBERES and other scientific societies, where current state of the art on research in this area will be reviewed. Speakers have been selected among worldwide-recognized leaders in basic and translational research related to acute pulmonary injury.

At the symposium's conclusion, attendees will be familiar with the evidence used to support the current recommendations for the treatment of patients with ARDS. More importantly they will be introduced to the basic and translational research that will likely alter therapy for this disease within the next several years.
